AUTOMOTIVE WINDOW FILM

AUTOMOTIVE WINDOW FILM CARE

XPEL PRIME Automotive Window Films were designed to keep their flawless appearance and clarity for many years. Follow these tips to properly care for your windows and keep them looking their best:

- Keep in mind that your window tint may have a hazy appearance or moisture bubbles for up to thirty days after installation. These conditions will disappear once the moisture used to apply your tint dries completely.
- Wait 5 days after installation before cleaning your windows.
- Use a microfiber towel slightly dampened with water to clean your windows. If necessary, mild, non-ammonia cleaners may also be used.
- Avoid the use of abrasive materials, such as scouring pads, to clean your tinted windows.

For additional care instructions, visit WWW.XPEL.COM/CARE
